One Child

By Christopher Cheng

Illustrated by Steven Woolman

Interlink Publishing Group, Inc

ISBN 1-56656-330-5

What can a child really do in such a complicated world? What difference can one child really make? **One Child** begins with a child who appears frustrated and overwhelmed by the problems facing her planet. After a spark of inspiration, she realizes that every attitude change begins with one person. She decides that she can make a difference in her everyday life. The child soon learns that her actions are contagious and others soon follow. The book is cleverly illustrated to reflect the emotional state of the young child. As the child becomes self-empowered, the illustrations become more vibrant and capture her growing joy. One is reminded of the Margaret Mead quote, "Never doubt that a small group of committed citizens can change the world; indeed it's the only thing that ever has." **One Child** challenges its readers to imagine a positive, inspiring future for our planet,

A Program With Guts

Kermit the Frog once lamented, "It's not that easy being green." Thanks to **Digital Frog 2**, it may just be a little easier. This update to the award winning, Digital Frog allows students to dissect and examine the anatomy and function of the frog's internal and external features. The program also includes a section on the ecology of frogs, species diversity, behavior and the life cycle.

The disk is designed with an educator's budget in mind and will run on older PCs and Macs. The program can be run directly from the disk or stored on the hard drive of individual machines, allowing one copy of the program to be used by many students simultaneously. The program is functional and easy to use, providing an intuitive interface and mapping. Information can be adjusted for students ranging from middle school to the university level. **Digital Frog 2** is good news for the millions of frogs dissected in classrooms around the world every year.

Digital Frog International publishes **Digital Frog 2**.
